London - United Kingdom

I am a passionate Robotics/SLAM Engineer based in London. I love writing code and especially when that code comes into life in actual robots and real-life applications.

Professional Experience

05/2019 -   **Robotics Product Engineer - SLAMcore**

01/2019 - 05/2019   **Robotics Engineer - SLAMcore**

09/2017 - 01/2019   **Junior Robotics Engineer - SLAMcore**

I work as a robotics product engineer at SLAMcore. We strive to provide robust and accurate SLAM solutions in Robotics. During my time there I have worked in sensor calibration, SLAM algorithms development and low-level optimisation, continuous integration as well as product development and deployment

2017, 2018   Mentor at **Google Summer of Code (GSoC)** with MRPT

2016   Student at Google Summer of Code (GSoC) with MRPT

Developed an open source implementation of the pose-graphSLAM algorithm with loop closure capabilities (**Project link**)

Technical Experience

MRPT 2016 -   **Core contributor at Mobile Robot Programming Toolkit (MRPT)**

MRPT is a open source robotics framework specialized in SLAM and mobile robot applications with over 300+ cites in Google Scholar, 40k+ downloads.

I am the author and maintainer of the single and multi-robot implementations of mrpt-graphslam:

- **mrpt-graphslam**
- **mrpt_graphslam_2d**

Languages

C++   Very experienced using modern C++ (11, 14, 17 standards) and in working with popular mathematical / computer vision and robotics libraries such as OpenCV, Eigen, MRPT, OpenGV. I have also extensively developed applications in **ROS**, **ROS2** and have used the **Gazebo** and **V-REP** robotic simulators.

Sample projects: **MRPT**, **mrpt_slam**, **robot-concepts**

Python	Expert in using either Python2 or Python3 and with using standard modules such as `Numpy`, `Scipy`, `Pandas`. Good knowledge of module such as `argparse`, `click`, `pyyaml`, `mechanize`. Decent knowledge of `scikit-learn`, `Tensorflow`. *Sample projects: **taskw_gcal_sync, awesome_albert_plugins, mendeley2calibre, Pump3000***
Vim/Vimscript	Implemented the **vim-debugstring plugin** for printf-like debugging in a variety of programming languages.
Rust	I have been experimenting with **Robotics/SLAM-related projects** in the Rust programming language.

Good:	**C**, **Bash**, **Fortran**, **Matlab**, **Modern CMake**, **Make**, **Sed**
Basic:	**Haskell**, **Awk**, **Java**, **Ansible**, **Django**, **Grafana**

Technologies:	**MRPT**, **ROS**, **ROS2**, **Gazebo**, **V-REP**, **Matlab**, **Fusion360**, **Solidworks**, **Grafana**

Education

2011 - 2017	**5yr Diploma in Mechanical Engineering** National Technical University of Athens (Athens, Greece) *Master Thesis: **Design and Development of Single and Multi-Robot Simultaneous Localization and Mapping (SLAM) Algorithms*** 8.4/10.0
2015	**ERASMUS Studies** KTH Royal Institute of Technology (Stockholm, Sweden) I studied for a semester in the department of *Engineering Science* where I undertook projects in advanced control theory, digital control, optimal control, and embedded systems for applications in robotics and aircraft control systems
2013 -	**Coursera/Udacity/EdX courses** I have successfully completed more than 10 courses in various MOOC platforms including **Udacity - Artificial Intelligence for Robotics**, **Udacity - Control of Mobile Robots**, **Coursera - Computer Networks**.

Supplementary

- Languages:
  - Greek (native speaker)
  - English
  - German (basic)
  - Spanish (basic)
- **2014:** 4th place in **EBEC** competition final round
- **2004:** Avlonarion chess tournament champion
